

## ADEKA to Participate in Polyolefin Conference in Houston

Feb. 17 2014

ADEKA Corporation will participate in International Polyolefins Conference 2014, “The Polyolefin Renaissance”, which will be held on February 23 - 26 at Hilton Houston North, Houston, Texas.

In this conference, we will introduce ADK STAB PEP-36A\*, a phosphite process stabilizer for polyolefins, which shows great advantages for polyolefin stabilization. The fast reactivity of ADK STAB PEP-36A enables the product to perform even under severe thermal process conditions such as rotomolding and for extended periods of time. The presentation will start from 1:30 pm, Feb. 25 at SALON B.

ADK STAB PEP-36A has been produced at Chinese plant, ADEKA Fine Chemical (Changshu), where other high performance antioxidants have been on stream also.

We are planning to supply these high performance phosphite and antioxidants globally at competitive price.

\*ADK STAB is not used as a trademark in the USA.
