ADEKA CORPORATION

**Opening Ceremony was Held for ADEKA KOREA CORP. R&D CENTER
- Establishment of Leading-edge Semiconductor Film Deposition
and Evaluation process -**

ADEKA KOREA CORPORATION, a consolidated subsidiary of ADEKA CORPORATION (President and Chief Executive Officer, Representative Director: Hidetaka Shirozume) , has completed the expansion and relocation of its R&D Center and held an opening ceremony.

We recognize the need to further strengthen our ability to evaluate film deposition and evaluation at the same level and develop at the same speed as semiconductor manufacturers as semiconductor innovation evolves at an accelerating pace. Therefore, ADEKA KOREA R&D Center (Hwaseong-si, Gyeonggi-do, Korea) acquired a facility with a total floor space that is seven times larger than the previous facility and was equipped and prepared for its opening. The clean room has been expanded to twice the area before the relocation, and the number of ALD deposition and evaluation equipment. This allows the R&D Center will be in charge of evaluation and analysis of leading-edge semiconductor film deposition materials. And we plan to double the number of deposition and evaluation equipment as well as employees by 2030.

R&D of new semiconductor materials in the ADEKA Group will continue to be conducted at the ADEKA CORP. Tokyo R&D Center (Arakawa-ku, Tokyo, Japan). In early 2026, we plan to move to a new research building to be constructed within the Kuki R&D Center (Kuki-shi, Saitama, Japan). We will achieve continuous expansion of ALD materials for semiconductors and a leap forward in process materials for semiconductor packages (post-process) by establishing a robust R&D structure.

ADEKA Group aims to become the world's top semiconductor materials company by building a strong structure in major semiconductor manufacturing areas around the world.

◆ **Overview of ADEKA KOREA CORPORATION R&D Center**

Location	Hwaseong-si, Gyeonggi-do, Korea
Details	Total floor area : 5,322 m ² * Building : 4 stories above ground, reinforced concrete construction, In-Houses laboratories, clean rooms, office/meeting rooms, storage warehouse, etc.
Investment value	1.3 billion yen

* Seven times the size of the current facility.
